

Appl. No. 09/923,032
Amdt. Dated: June 5, 2006
Reply to Office Action of May 8, 2006

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Currently amended) A feminine sanitary protection device for use with an undergarment, comprising:

a liquid impermeable outer cover having a central longitudinal axis, and including a top edge, a bottom edge, a first side edge and a second side edge, a first side section between the first side edge and the central longitudinal axis, and a second side section between the second side edge and the central longitudinal axis,

a first frangible line in the first side section of the outer cover, and a second frangible line in the second side section of the outer cover,

a liquid permeable liner and an absorbent medium are integrally joined with the outer cover to form a liquid absorbent device, at least the liquid absorbent medium being located between the first frangible line and the second frangible line, and

a release strip located on an exterior surface of the outer cover, wherein

the liquid absorbent device being folded so the outer cover forms the exterior of the folded liquid absorbent device such that, upon removal of portions of the outer cover outboard the frangible lines, and unfolding the liquid absorbent device, removing the release strip, and use of the liquid absorbent device on the undergarment, a remaining portion of the outer cover, integrally joined with the liquid permeable liner and the absorbent medium, forms a liquid impermeable layer of the liquid absorbent device with the outer cover being located between the liquid permeable liner and the absorbent medium and the undergarment.

2. (Original) The device of claim 1 further comprising a first joining element in the first side section, and a second joining element in the second side section.

3. (Original) The device of claim 2 wherein the first joining element and the second joining element join respective portions of the folded outer cover together.

4. (Original) The device of claim 1 wherein each frangible line is in generally overlapping alignment with itself.

Appl. No. 09/923,032
Amdt. Dated: June 5, 2006
Reply to Office Action of May 8, 2006

5. (Original) The device of claim 2 wherein the first frangible line is between the first joining element and the central longitudinal axis, and the second frangible line is between the second joining element and the central longitudinal axis.

6. (Currently Amended) The device of claim 1 further comprising a release strip adhesive for the liquid absorbent device wherein the release strip adhesive is located between ~~on an exterior of~~ the outer cover and the release strip, wherein the release strip adhesive serves to secure the device to the undergarment.

7. (Currently Amended) The device of claim 5 further comprising a vaginal insertion device placed with the liquid absorbent device.

8. (Currently amended) A feminine sanitary protection device for use with an undergarment, comprising:

a liquid impermeable outer cover having a central longitudinal axis, and including a top edge, a bottom edge, a first side edge and a second side edge, a first side section between the first side edge and the central longitudinal axis, and a second side section between the second side edge and the central longitudinal axis,

means in the first side section and in the second side section for removing at least a portion of the first side section and at least a portion of the second side section from the outer cover, and

a liquid permeable liner and an absorbent medium are integrally joined with the outer cover to form a liquid absorbent device, and

a release strip located on an exterior surface of the outer cover, wherein

the liquid absorbent device being folded so the outer cover forms the exterior of the folded liquid absorbent device such that, upon removal of at least a portion of the first side section and at least a portion of the second side section from the outer cover, and unfolding the liquid absorbent device, removing the release strip, and use of the liquid absorbent device on the undergarment, a remaining portion of the outer cover, integrally joined with the liquid permeable liner and the absorbent medium, forms a liquid impermeable layer of the liquid absorbent device with the outer cover being located between the liquid permeable liner and the absorbent medium and the undergarment.

9. (Original) The device of claim 8 further comprising means in the first side section and in the second side section for joining respective portions of the folded outer cover together.

10. (Original) The device of claim 8 wherein the liquid absorbent device with its outer cover is tri-folded.

11. (Original) The device of claim 9 wherein the removing means is between the joining means.

12. (Currently Amended) The device of claim 8 further comprising a release strip adhesive for the liquid absorbent device wherein the release strip adhesive is located between on an exterior of the outer cover and the release strip, wherein the release strip adhesive serves to secure the device to the undergarment.

13. (Original) The device of claim 8 wherein the removing means includes a first frangible line in the first side section, and a second frangible line in the second side section.

14. (Original) The device of claim 13 wherein each the frangible line includes perforations in the outer cover.

15. (Original) The device of claim 8 further comprising a vaginal insertion device placed with the liquid absorbent device.

16-28. (Cancelled)

29. (Currently amended) A feminine sanitary protection device for use with an undergarment, comprising:

a liquid impermeable outer cover having a central longitudinal axis, and including a top edge, a bottom edge, a first side edge and a second side edge, a first side section between the first side edge and the central longitudinal axis, and a second side section between the second side edge and the central longitudinal axis,

a first frangible line in the first side section of the outer cover, and a second frangible line in the second side section of the outer cover,

a liquid permeable liner and an absorbent medium joined with the outer cover to form a liquid absorbent device, at least the liquid absorbent medium being located between the first frangible line and the second frangible line, and

a release strip located on an exterior surface of the outer cover, wherein

the liquid absorbent device being folded so the outer cover forms the exterior of the folded liquid absorbent device such that, upon removal of portions of the outer cover outboard the frangible lines, and unfolding the liquid absorbent device, removing the release strip, and placement adjacent the undergarment for use of the liquid absorbent device on the undergarment, a remaining portion of the outer cover is adhered to the liquid permeable liner and the absorbent medium, the remaining portion forms a liquid impermeable layer of the liquid absorbent device with the outer cover being located between the liquid permeable liner and the absorbent medium and the undergarment.

30. (Previously presented) The device of claim 29 further comprising a first joining element in the first side section, and a second joining element in the second side section wherein the first joining element and the second joining element join respective portions of the folded outer cover together.

31. (Previously presented) The device of claim 29 wherein each frangible line is in generally overlapping alignment with itself.

Appl. No. 09/923,032
Amdt. Dated: June 5, 2006

32. (Previously presented) The device of claim 29 further comprising a first joining element in the first side section, and a second joining element in the second side section wherein the first frangible line is between the first joining element and the central longitudinal axis, and the second frangible line is between the second joining element and the central longitudinal axis.

33. (Currently amended) The device of claim 29 further comprising a release strip adhesive for the liquid absorbent device wherein the release strip adhesive is located between on an exterior of the outer cover and the release strip, wherein the release strip adhesive serves to secure the device to the undergarment.

34. (New) A feminine sanitary protection device for use with an undergarment, comprising:

a liquid impermeable outer cover having a central longitudinal axis, and including a top edge, a bottom edge, a first side edge and a second side edge, a first side section between the first side edge and the central longitudinal axis, and a second side section between the second side edge and the central longitudinal axis,

means in the first side section and in the second side section for removing at least a portion of the first side section and at least a portion of the second side section from the outer cover, and

a liquid permeable liner and an absorbent medium are integrally joined with the outer cover to form a liquid absorbent device, and

a vaginal insertion device in contact with the liquid permeable liner, wherein

the liquid absorbent device and the vaginal insertion device being folded together so the outer cover forms the exterior of the folded liquid absorbent device such that, upon removal of at least a portion of the first side section and at least a portion of the second side section from the outer cover, unfolding the liquid absorbent device, and use of the liquid absorbent device on the undergarment, a remaining portion of the outer cover, integrally joined with the liquid permeable liner and the absorbent medium, forms a liquid impermeable layer of the liquid absorbent device with the outer cover being located between the liquid permeable liner and the absorbent medium and the undergarment.

35. (New) The device of claim 34 wherein the removing means includes a first frangible line in the first side section, and a second frangible line in the second side section.

36. (New) The device of claim 35 wherein each the frangible line includes perforations in the outer cover.
